

Supplier Framework Agreement

Seer Construction Group and Atlas Structural Fabrication
Agreement SCG-ASF-2026-17 | Effective April 1, 2026

1. Scope

Atlas Structural Fabrication will fabricate and deliver structural steel, connection material, and supporting quality records for authorized Seer projects. Individual purchase orders establish quantity, price, delivery location, and project-specific requirements.

2. Qualification and evidence

The supplier shall maintain current AISC Building Fabricator certification, qualified welding procedures, traceable material test reports, and documented corrective action for nonconforming work. Evidence must be available to Seer before material release.

3. Austin delivery commitment

For purchase order PO-88142, the supplier commits to sequence shipment for Primavera milestone A44018 and to identify project AUS-BANK-01 on every packing list. A one-business-day variance is permitted only when the site superintendent and project controls manager approve the revised delivery window.

4. Data and records

Records exchanged under this agreement may contain commercial and project-sensitive information. Seer will retain supplier evidence within its governed Oracle environment. The supplier consents to matching its source identifiers to Seer project, asset, purchasing, schedule, and inspection identifiers for audit and operational use.

5. Decision status

Atlas Structural Fabrication is approved for the Austin structural package subject to continued certification, satisfactory inspection results, and closure of any project nonconformance records.
